Transformations of Vertex Form

$$f(x) = a(x - h)^2 + k$$

Vertex: (h, k)

What does a do?

- reflect across the x-axis. (-a)
- vertical stretch (a > 1)
- vertical shrink (0 < a < 1)

What does h do?

- moves left (+h)
- moves right (-h)

What does k do?

- moves up (+k)
- moves down (-k)

Determine what transformations are applied in the following functions.

1. $f(x) = (x - 3)^2 + 5$

2. $f(x) = -(x - 2)^2 + 7$

3. $f(x) = \frac{1}{3}(x + 3)^2 - 2$

4. $f(x) = 4(x - 3)^2 + 8$

Vertex: (h, k)

Axis of Symmetry: $x = h$

Given the graph of the quadratic, find a, h, & k. Then write the equation in vertex form.

5.

- a = _____
- h = _____
- k = _____
- f(x) = _____

6.

- a = _____
- h = _____
- k = _____
- f(x) = _____

7.

- $a = \underline{\hspace{2cm}}$
- $h = \underline{\hspace{2cm}}$
- $k = \underline{\hspace{2cm}}$
- $f(x) = \underline{\hspace{2cm}}$

8.

- $a = \underline{\hspace{2cm}}$
- $h = \underline{\hspace{2cm}}$
- $k = \underline{\hspace{2cm}}$
- $f(x) = \underline{\hspace{2cm}}$

Steps to Graphing in VERTEX form:

- Find the vertex. Plot it.
- Find the axis of symmetry. Graph this lightly as a dashed vertical line.
- On your calculator: TABLE, EDIT FUCTION, ENTER, START = <enter your h-value>, CALC, ENTER. Scroll up and down to get other ordered pairs.
- Connect in a u-shape with arrows at each end.

Graph & identify the vertex and axis of symmetry.

9. $f(x) = (x+2)^2 + 1$

10. $f(x) = 2(x-4)^2 - 1$

11. $f(x) = -(x-1)^2 + 2$
