Graphing and Characteristics of Exponential Equations

Transformations:

$$y = a(b)^{x-h} + k$$

-a: reflect across x-axis
 |a| > 1: v stretch of a
 |a| < 1: v shrink of a

h: left/right
 + -
 (in equation)

k: up/down
 + -

Domain:

$$(-\infty, \infty)$$

Range:

$$(-\infty, k) \text{ or } (k, \infty)$$

Asymptote:

$y = k$; the line the graph approaches but never touches

X-Int:

look at the graph, or plug in 0 for y and solve
 (may not exist)

Y-Int:

look at the graph, or plug in a 0 for x and solve
 (ALWAYS exists)

Increasing or Decreasing

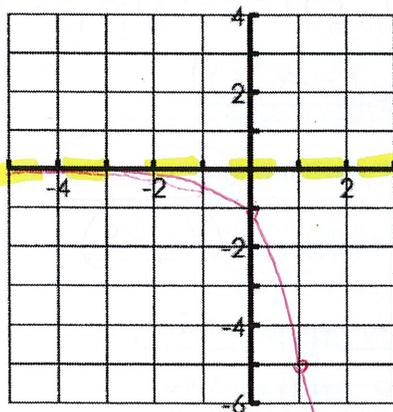

$$\emptyset \text{ or } (\infty, \infty)$$

It will only do one or the other

End Behavior:

$x \rightarrow \infty, f(x) \rightarrow$ _____ $\rightarrow \infty$ if it's going up forever
 $x \rightarrow -\infty, f(x) \rightarrow$ _____ $\rightarrow -\infty$ if it's going down forever
 k if it's going toward the asymptote
